

BG Scripts Day 28-4

1. Group-Wise Incident Count

Use GlideAggregate to count active incidents grouped by Assignment Group.

```
var records = new GlideAggregate('incident');
records.addActiveQuery();
records.groupBy('assignment_group');
records.addAggregate('COUNT');
records.query();

while(records.next()) {
    gs.print(records.assignment_group.getDisplayValue() + "
>>> " + records.getAggregate('COUNT'));
}
```

1. Latest Active Incidents

Write a Background Script to fetch the latest 10 active incidents using: GlideRecord, addActiveQuery(), orderByDesc(), and setLimit().

```
var records = new GlideRecord('incident');
records.addActiveQuery();
records.orderByDesc('sys_created_on');
records.setLimit(10);
records.query();

while(records.next()) {
    gs.print(records.number + " | " + records.short_description);
}
```

1. Safe Update With Limit

Write a script to update only the latest 5 active incidents and add work notes. Use setLimit(5) and orderByDesc().

```
var records = new GlideRecord('incident');
records.addActiveQuery();
records.orderByDesc('sys_created_on');
records.setLimit(5);
records.query();

while(records.next()) {
    records.work_notes = "Updated from Background Script safely";
    records.update();

    gs.print("Updated: " + records.number);
}
```
